EDUCATION

Nanjing Tech University 09/2021-07/2024

Master of Science in Computer Science and Technology

GPA: 3.76/4.0

Nanjing University of Information Science & Technology 09/2017-07/2021

Bachelor of Science in Computer Science and Technology

GPA: 3.73/4.0 (Grade Ranking: 2/264)

RESEARCH EXPERIENCE

Huawei Mindspore Neural Network Framework Operator Development 07/2021-11/2022

- Worked on the development of SparseToSparseSetOperation, SparseMatrixTranspose, ExtractGlimpse, and SegmentMin
- Used unit test with the Google Test framework (gtest) to test the functionality of operators and employed system test by constructing large input data to evaluate the performance of operators, and adopted the Unix naming methods to ensure code readability

Real-time ARAP (As-Rigid-As-Possible) Mesh Deformation based on the High-performance Least Squares Computation Library Opt 04/2022-07/2022

- Established the front-end and back-end interaction framework and developed the back-end ARAP mesh deformation algorithm
- Implemented the CPU version code for the control group (based on the Eigen library), CUDA, and OpenGL interaction logic
- Completed screen-space ray tracing and ray tracing acceleration structure BVH (Bounding Volume Hierarchy), and realized Matcap rendering for achieving better visual effects at a lower rendering cost

PROJECT EXPERIENCE

Compute Shader-based Path Tracing Engine 11/2022-Present

- Used offline rendering techniques on the CPU to obtain the Ground Truth of the rendered results, and implemented data transfer between the CPU and compute shader using OpenGL's Uniform and Storage Buffer

More Advanced Ray Tracing Engine 11/2021-04/2022

- Implemented Lambertian, Phong, Blinn-Phong reflection models, Cook Torrance specular reflection model, Disney Principled BSDF, and their respective Importance Sampling Techniques on the Shader side, implemented Next Event Estimation, and further implemented Multiple Importance Sampling techniques to further reduce variance and coverage time in the scene

Ray Tracing Toy Engine 09/2020-01/2021

- Implemented basic primitives such as spheres and triangles, as well as materials like Diffuse, Metal, Glass, and texture mapping, implemented a bounding volume hierarchy for ray tracing acceleration, and ultimately achieved Progressive Ray Tracing on the GPU using the OpenGL API

Online Canonical LR Parser Syntax Analysis Program 02/2020-07/2020

- Took charge of algorithm implementation, syntax tree generation, and error list generation
- Used C++ to implement the algorithm for generating the Canonical LR parser analysis table and improved the control program, error list generation, and matching process display
- Visualized the syntax tree using D3.js

Lexical Analysis Program 02/2020-07/2020

- Implemented logic for removing comments and checking for closed multiline comments
- Realized the functions of lexical checks, character and character-to-escape sequence matching, and special symbol checks
- Generated token pairs that can be used for further processing

Android Game Development 02/2020-07/2020

- Implemented periodic difficulty level upgrades based on the score
- Drew and refreshed graphics by using the Canvas in Android
- Utilized a multi-thread strategy and the Handle in the sub-thread to achieve real-time refreshing of the main thread UI

Regular Expression to Minimal DFA Conversion 01/2020-02/2020

- Used C++ to write Thompson's construction algorithm to generate NFA from regular expressions and persisted it
- Combined with ϵ -closure theory to determinize NFA using C++ and used the Breadth First Search (BFS)

algorithm to minimize DFA

- Performed a Depth First Search (DFS) traversal on the generated DFA to obtain the corresponding DOT script and further generated a PDF

Big Data Algorithm Platform based on Python

09/2019-01/2020

- Wrote the Apriori algorithm with Python, implemented the FP-Growth algorithm, and visualized the constructed results using Matplotlib's TreePlotter
- Used the sklearn toolkit to implement k-means, k-medoids, and FP-Growth algorithms, and utilized SVM classification to implement online handwritten digit recognition
- Compared the efficiency of the Apriori algorithm, Eclat algorithm, and FP-Growth algorithm on the Growerries dataset with different data sizes

Personal Blog System based on Django Type

07/2019-09/2019

- Used the Django framework and Python to implement functions such as article publishing, comments, user feedback, and blogger avatar
- Used SQLITE database for persistent storage of articles
- Used the Virtualenv toolkit for seamless deployment from the local machine to the cloud
- Deployed the project using NGINX server and wrote CONF scripts to prevent F5 refresh attacks and other DDoS attack

Image Processing System Design based on MATLAB

02/2019-07/2019

- Used MATLAB to write threshold methods, Otsu algorithm, and other sharpening and filtering algorithms for image binarization and implemented spatial transformations for images (rotation, translation, skew, scaling) and adaptive smoothing filters
- Compared performance differences among various filtering algorithms and implemented polynomial image wrapping functionality

SOFTWARE COPYRIGHT

Computer Software Copyright Registration Certificate for the Software: Illumengine Rendering System V1.0 based on OpenGL, 2021 (registration number: 2021SR1016796)

GRADUATION DESIGN

Three-dimensional Rendering System

2020-2021

- Imported obj format models and completed the basic transformations of objects (translation, scaling, rotation)
- Improved the shadow quality in open scenes using CSMs algorithm based on the implementation of real-time shadows using depth map techniques
- Implemented the Omnidirectional Shadow Maps technique for point light sources and realized soft shadows using the PCF method
- Visualized the Frustum bounding box of the main camera by implementing a debug camera
- Supported the functions of editing texture maps such as diffuse maps, specular maps, and ambient maps for model meshes
- Realized various visual effects (HDR, Blooming) and basic functionalities (normal visualization, normal flipping, etc.) for enhancing the visuals

AWARD AND HONORS

| | |
|--|------|
| Provincial First Prize & National Second Prize in the 11 th C/C++ Programming Contest | 2020 |
| First-class Scholarship & Merit Student, Nanjing University of Information Science & Technology | 2020 |
| First-class Scholarship, Nanjing University of Information Science & Technology | 2018 |
| Merit Student Scholarship, Nanjing University of Information Science & Technology | 2018 |
| Third Prize in Programming Contest, Nanjing University of Information Science & Technology | 2018 |
| Excellent Prize in Mathematical Modeling of Nanjing University of Information Science & Technology | 2018 |
| Third Prize in Jiangsu Provincial Mathematical Contest | 2017 |
| Third Prize in Mathematical Contest, Nanjing University of Information Science & Technology | 2017 |

SKILLS & OTHERS

Languages: Chinese (native), English (proficient), Japanese (preliminary)

Programming Languages: Proficient in C/C++, Python, Java, MATLAB, familiar with shell language

Computer Tools: using MATLAB to write image processing algorithms and visual programs, and using matplotlib library in Python for visual programming

Other Certificates: PAT Level B Full Score Certificate, Jiangsu Provincial Computer Level 3 Certificate, National Computer Level 2 Certificate

Hobbies: Violin (Level 10)
